

HEADLIGHT BEAM TESTER

CLASS IV, CLASS VII

Generate accurate readings and make sure your customers' lights are in line using the DVSA-approved John Bean® Headlight Beam Tester.

The tester is a fully adjustable headlamp alignment unit that comes with a digital lux meter as standard.

The Headlight Tester also benefits from two lasers: the first for longitude alignment with the vehicle; the second a forward-facing laser, central to the lens for setting the height against the vehicle.

Both lasers include as standard a 30-second auto-off timing system.

John Bean's Headlight Tester is approved by DVSA for the testing of all vehicle classes with the appropriate rails at four meters for cars and light commercials. For class V testing of HGV/PSV vehicles, an optional unit is available. Additional extension rails are available upon request.
